constexpr for specialized memory algorithms

Document #:	PXXXXR0
Date:	2021-01-08
Project:	Programming Language C++
Audience:	Library Evolution Group

Reply-to:	Michael Schellenberger Costa <mschellenbergercosta@googlemail.com>

1 Introduction

This paper proposes adding `constexpr` support to the specialized memory algorithms. This is essentially a followup to [P0784R7] which added `constepxr` support for all necessary machinery.

2 Motivation and Scope

These algorithms have been forgotten in the final crunch to get C++20 out. To add insult to injury, they are essential to implementing constexpr container support, so every library has to provide its own internal helpers to do the exact same thing during constant evaluation. Just fill the void and add `constexpr` everywhere except the parallel overloads.

But wait, what about `uninitialized_default_construct`? We cannot use `std::construct_at` there! This is correct and there are two possible solutions:

1. Add an overload of `std::construct_at` that takes a `std::default_construct_tag` and does the right thing. This is just bad design. If we go to the trouble of inventing a new name, we should do #2
2. Add a new library function `std::default_construct_at` that does the right thing. This is what is proposed here.

3 Impact on the Standard

This proposal is a pure library extension.

4 Proposed Wording

4.1 Modify 7.7 [expr.const] §6 of [N4762] as follows:

For the purposes of determining whether an expression E is a core constant expression, the evaluation of a call to a member function of std::allocator as defined in [allocator.members], where T is a literal type, does not disqualify E from being a core constant expression, even if the actual evaluation of such a call would otherwise fail the requirements for a core constant expression. Similarly, the evaluation of a call to std::destroy_at, std::ranges::destroy_at, std::default_construct_at, std::ranges::default_construct_at, std::construct_at, or std::ranges::construct_at does not disqualify E from being a core constant expression unless:

for a call to std::default_construct_at, std::ranges::default_construct_at, std::construct_at or std::ranges::construct_at, the first argument, of type T*, does not point to storage allocated with std::allocator or to an object whose lifetime began within the evaluation of E, or the evaluation of the underlying constructor call disqualifies E from being a core constant expression, or

4.2 Modify 20.10.2 [memory.syn] of [N4762] as follows:

```
template<class NoThrowForwardIterator>
  constexpr void uninitialized_default_construct(NoThrowForwardIterator first,
                                                 NoThrowForwardIterator last);

template<class ExecutionPolicy, class NoThrowForwardIterator>
  void uninitialized_default_construct(ExecutionPolicy&& exec,        // see [algorithms.parallel.overl
                                       NoThrowForwardIterator first,
                                       NoThrowForwardIterator last);
template<class NoThrowForwardIterator, class Size>
  constexpr NoThrowForwardIterator
    uninitialized_default_construct_n(NoThrowForwardIterator first, Size n);
template<class ExecutionPolicy, class NoThrowForwardIterator, class Size>
  NoThrowForwardIterator
    uninitialized_default_construct_n(ExecutionPolicy&& exec,         // see [algorithms.parallel.overl
                                      NoThrowForwardIterator first, Size n);

namespace ranges {
  template<no-throw-forward-iterator I, no-throw-sentinel-for<I> S>
    requires default_initializable<iter_value_t<I>>
      constexpr I uninitialized_default_construct(I first, S last);
  template<no-throw-forward-range R>
    requires default_initializable<range_value_t<R>>
      constexpr borrowed_iterator_t<R> uninitialized_default_construct(R&& r);

  template<no-throw-forward-iterator I>
    requires default_initializable<iter_value_t<I>>
      constexpr I uninitialized_default_construct_n(I first, iter_difference_t<I> n);
}

template<class NoThrowForwardIterator>
  constexpr void uninitialized_value_construct(NoThrowForwardIterator first,
                                               NoThrowForwardIterator last);
template<class ExecutionPolicy, class NoThrowForwardIterator>
  void uninitialized_value_construct(ExecutionPolicy&& exec,  // see [algorithms.parallel.overloads]
                                     NoThrowForwardIterator first,
                                     NoThrowForwardIterator last);
template<class NoThrowForwardIterator, class Size>
  constexpr NoThrowForwardIterator
    uninitialized_value_construct_n(NoThrowForwardIterator first, Size n);
template<class ExecutionPolicy, class NoThrowForwardIterator, class Size>
  NoThrowForwardIterator
    uninitialized_value_construct_n(ExecutionPolicy&& exec,   // see [algorithms.parallel.overloads]
                                    NoThrowForwardIterator first, Size n);

namespace ranges {
  template<no-throw-forward-iterator I, no-throw-sentinel-for<I> S>
    requires default_initializable<iter_value_t<I>>
      constexpr I uninitialized_value_construct(I first, S last);
  template<no-throw-forward-range R>
    requires default_initializable<range_value_t<R>>
      constexpr borrowed_iterator_t<R> uninitialized_value_construct(R&& r);
```

```
  template<no-throw-forward-iterator I>
    requires default_initializable<iter_value_t<I>>
      constexpr I uninitialized_value_construct_n(I first, iter_difference_t<I> n);
}

template<class InputIterator, class NoThrowForwardIterator>
  constexpr NoThrowForwardIterator
    uninitialized_copy(InputIterator first, InputIterator last,

      constexpr borrowed_iterator_t<R> uninitialized_fill(R&& r, const T& x);

  template<no-throw-forward-iterator I, class T>
    requires constructible_from<iter_value_t<I>, const T&>
      constexpr I uninitialized_fill_n(I first, iter_difference_t<I> n, const T& x);
}
```

```
  // [specialized.construct], construct_at
  template<class T, class... Args>
    constexpr T* construct_at(T* location, Args&&... args);

  namespace ranges {
    template<class T, class... Args>
      constexpr T* construct_at(T* location, Args&&... args);
  }
```

```
  // [specialized.default_construct], default_construct_at
  template<class T>
    constexpr T* default_construct_at(T* location);

  namespace ranges {
    template<class T>
      constexpr T* default_construct_at(T* location);
  }
```

4.3 Modify 25.11.3 [uninitialized.construct.default] of [N4762] as follows:

```
    template<class NoThrowForwardIterator>
-     void uninitialized_default_construct(NoThrowForwardIterator first, NoThrowForwardIterator last);
+     constexpr void uninitialized_default_construct(NoThrowForwardIterator first,
+                                                    NoThrowForwardIterator last);

  Effects: Equivalent to:
    for (; first != last; ++first)
-     ::new (voidify(*first)) typename iterator_traits<NoThrowForwardIterator>::value_type;
+     default_construct_at(to_address(first));

  namespace ranges {
    template<no-throw-forward-iterator I, no-throw-sentinel-for<I> S>
      requires default_initializable<iter_value_t<I>>
-     I uninitialized_default_construct(I first, S last);
+     constexpr I uninitialized_default_construct(I first, S last);
    template<no-throw-forward-range R>
      requires default_initializable<range_value_t<R>>
-     borrowed_iterator_t<R> uninitialized_default_construct(R&& r);
+     constexpr borrowed_iterator_t<R> uninitialized_default_construct(R&& r);
  }

  Effects: Equivalent to:
    for (; first != last; ++first)
-     ::new (voidify(*first)) remove_reference_t<iter_reference_t<I>>;
+     default_construct_at(to_address(first));
    return first;

  template<class NoThrowForwardIterator, class Size>
-   NoThrowForwardIterator uninitialized_default_construct_n(NoThrowForwardIterator first, Size n);
+   constexpr NoThrowForwardIterator
+     uninitialized_default_construct_n(NoThrowForwardIterator first, Size n);

  Effects: Equivalent to:
```

```
    for (; n > 0; (void)++first, --n)
-     ::new (voidify(*first)) typename iterator_traits<NoThrowForwardIterator>::value_type;
+     default_construct_at(to_address(first));
    return first;

  namespace ranges {
    template<no-throw-forward-iterator I>
      requires default_initializable<iter_value_t<I>>
-     I uninitialized_default_construct_n(I first, iter_difference_t<I> n);
+     constexpr I uninitialized_default_construct_n(I first, iter_difference_t<I> n);
  }

  Effects: Equivalent to:
    return uninitialized_default_construct(counted_iterator(first, n),
                                           default_sentinel).base();
```

4.4 Modify 25.11.4 [uninitialized.construct.value] of [N4762] as follows:

```
  template<class NoThrowForwardIterator>
-   void uninitialized_value_construct(NoThrowForwardIterator first, NoThrowForwardIterator last);
+   constexpr void uninitialized_value_construct(NoThrowForwardIterator first,
+                                                NoThrowForwardIterator last);

  Effects: Equivalent to:
    for (; first != last; ++first)
-     ::new (voidify(*first)) typename iterator_traits<NoThrowForwardIterator>::value_type();
+     construct_at(to_address(first));

  namespace ranges {
    template<no-throw-forward-iterator I, no-throw-sentinel-for<I> S>
      requires value_initializable<iter_value_t<I>>
-     I uninitialized_value_construct(I first, S last);
+     constexpr I uninitialized_value_construct(I first, S last);
    template<no-throw-forward-range R>
      requires value_initializable<range_value_t<R>>
-     borrowed_iterator_t<R> uninitialized_value_construct(R&& r);
+     constexpr borrowed_iterator_t<R> uninitialized_value_construct(R&& r);
  }

  Effects: Equivalent to:
    for (; first != last; ++first)
-     ::new (voidify(*first)) remove_reference_t<iter_reference_t<I>>();
+     construct_at(to_address(first));
    return first;

  template<class NoThrowForwardIterator, class Size>
-   NoThrowForwardIterator uninitialized_value_construct_n(NoThrowForwardIterator first, Size n);
+   constexpr NoThrowForwardIterator
+     uninitialized_value_construct_n(NoThrowForwardIterator first, Size n);

  Effects: Equivalent to:
    for (; n > 0; (void)++first, --n)
-     ::new (voidify(*first)) typename iterator_traits<NoThrowForwardIterator>::value_type();
```

```
+     construct_at(to_address(first));
    return first;

  namespace ranges {
    template<no-throw-forward-iterator I>
      requires value_initializable<iter_value_t<I>>
-     I uninitialized_value_construct_n(I first, iter_difference_t<I> n);
+     constexpr I uninitialized_value_construct_n(I first, iter_difference_t<I> n);
  }

  Effects: Equivalent to:
    return uninitialized_value_construct(counted_iterator(first, n),
                                         value_sentinel).base();
```

4.5 Modify 25.11.5 [uninitialized.copy] of [N4762] as follows:

```
  template<class InputIterator, class NoThrowForwardIterator>
-   NoThrowForwardIterator uninitialized_copy(InputIterator first, InputIterator last,
-                                             NoThrowForwardIterator result);
+   constexpr NoThrowForwardIterator
+     uninitialized_copy(InputIterator first, InputIterator last,
+                        NoThrowForwardIterator result);

  Preconditions:
    result + [0, (last - first)) does not overlap with [first, last).

  Effects: Equivalent to:
    for (; first != last; ++result, (void) ++first)
-     ::new (voidify(*result))
-       typename iterator_traits<NoThrowForwardIterator>::value_type(*first);
+     construct_at(to_address(result), *first);

  Returns: result.

  namespace ranges {
    template<input_iterator I, sentinel_for<I> S1,
             no-throw-forward-iterator O, no-throw-sentinel-for<O> S2>
      requires constructible_from<iter_value_t<O>, iter_reference_t<I>>
-     uninitialized_copy_result<I, O>
+     constexpr uninitialized_copy_result<I, O>
        uninitialized_copy(I ifirst, S1 ilast, O ofirst, S2 olast);
    template<input_range IR, no-throw-forward-range OR>
      requires constructible_from<range_value_t<OR>, range_reference_t<IR>>
-     uninitialized_copy_result<borrowed_iterator_t<IR>, borrowed_iterator_t<OR>>
+     constexpr uninitialized_copy_result<borrowed_iterator_t<IR>, borrowed_iterator_t<OR>>
        uninitialized_copy(IR&& in_range, OR&& out_range);
  }

  Preconditions:
    [ofirst, olast) does not overlap with [ifirst, ilast).

  Effects: Equivalent to:
    for (; ifirst != ilast && ofirst != olast; ++ofirst, (void)++ifirst)
```

```
-     ::new (voidify(*ofirst)) remove_reference_t<iter_reference_t<O>>(*ifirst);
+     construct_at(to_address(ofirst), *ifirst);
    return {std::move(ifirst), ofirst};

  template<class InputIterator, class Size, class NoThrowForwardIterator>
-   NoThrowForwardIterator uninitialized_copy_n(InputIterator first, Size n,
-                                               NoThrowForwardIterator result);
+   constexpr NoThrowForwardIterator
+     uninitialized_copy_n(InputIterator first, Size n, NoThrowForwardIterator result);

  Preconditions:
    result + [0, n) does not overlap with first + [0, n).

  Effects: Equivalent to:
    for ( ; n > 0; ++result, (void) ++first, --n)
-     ::new (voidify(*result))
-       typename iterator_traits<NoThrowForwardIterator>::value_type(*first);
+     construct_at(to_address(result), *first);

  Returns: result.

  namespace ranges {
    template<input_iterator I, no-throw-forward-iterator O, no-throw-sentinel-for<O> S>
      requires constructible_from<iter_value_t<O>, iter_reference_t<I>>
-     uninitialized_copy_n_result<I, O>
+     constexpr uninitialized_copy_n_result<I, O>
        uninitialized_copy_n(I ifirst, iter_difference_t<I> n, O ofirst, S olast);
  }

  Preconditions:
    [ofirst, olast) does not overlap with ifirst + [0, n).

  Effects: Equivalent to:
    auto t = uninitialized_copy(counted_iterator(ifirst, n),
                                default_sentinel, ofirst, olast);
    return {std::move(t.in).base(), t.out};
```

4.6 Modify 25.11.6 [uninitialized.move] of [N4762] as follows:

```
  template<class InputIterator, class NoThrowForwardIterator>
-   NoThrowForwardIterator uninitialized_move(InputIterator first, InputIterator last,
-                                             NoThrowForwardIterator result);
+   constexpr NoThrowForwardIterator
+     uninitialized_move(InputIterator first, InputIterator last, NoThrowForwardIterator result);

  Preconditions:
    result + [0, (last - first)) does not overlap with [first, last).

  Effects: Equivalent to:
    for (; first != last; ++result, (void) ++first)
-     ::new (voidify(*result))
-       typename iterator_traits<NoThrowForwardIterator>::value_type(std::move(*first));
+     construct_at(to_address(result), std::move(*first));
```

```
  Returns: result.

  namespace ranges {
    template<input_iterator I, sentinel_for<I> S1,
             no-throw-forward-iterator O, no-throw-sentinel-for<O> S2>
      requires constructible_from<iter_value_t<O>, iter_rvalue_reference_t<I>>
-     uninitialized_move_result<I, O>
+     constexpr uninitialized_move_result<I, O>
        uninitialized_move(I ifirst, S1 ilast, O ofirst, S2 olast);
    template<input_range IR, no-throw-forward-range OR>
      requires constructible_from<range_value_t<OR>, range_rvalue_reference_t<IR>>
-     uninitialized_move_result<borrowed_iterator_t<IR>, borrowed_iterator_t<OR>>
+     constexpr uninitialized_move_result<borrowed_iterator_t<IR>, borrowed_iterator_t<OR>>
        uninitialized_move(IR&& in_range, OR&& out_range);
  }

  Preconditions:
    [ofirst, olast) does not overlap with [ifirst, ilast).

  Effects: Equivalent to:
    for (; ifirst != ilast && ofirst != olast; ++ofirst, (void)++ifirst)
-     ::new (voidify(*ofirst))
-       remove_reference_t<iter_reference_t<O>>(ranges::iter_move(ifirst);
+     construct_at(to_address(ofirst), ranges::iter_move(ifirst);
    return {std::move(ifirst), ofirst};

  [Note 1: If an exception is thrown, some objects in the range [first, last) are left in a valid, but un

  template<class InputIterator, class Size, class NoThrowForwardIterator>
-   NoThrowForwardIterator uninitialized_move_n(InputIterator first, Size n,
-                                               NoThrowForwardIterator result);
+   constexpr NoThrowForwardIterator
+     uninitialized_move_n(InputIterator first, Size n, NoThrowForwardIterator result);

  Preconditions:
    result + [0, n) does not overlap with first + [0, n).

  Effects: Equivalent to:
    for ( ; n > 0; ++result, (void) ++first, --n)
-     ::new (voidify(*result))
-       typename iterator_traits<NoThrowForwardIterator>::value_type(std::move(*first));
+     construct_at(to_address(result), std::move(*first));
  Returns: result.

  namespace ranges {
    template<input_iterator I, no-throw-forward-iterator O, no-throw-sentinel-for<O> S>
      requires constructible_from<iter_value_t<O>, iter_rvalue_reference_t<I>>
-     uninitialized_move_n_result<I, O>
+     constexpr uninitialized_move_n_result<I, O>
        uninitialized_move_n(I ifirst, iter_difference_t<I> n, O ofirst, S olast);
  }

  Preconditions:
```

```
    [ofirst, olast) does not overlap with ifirst + [0, n).

  Effects: Equivalent to:
    auto t = uninitialized_move(counted_iterator(ifirst, n),
                                default_sentinel, ofirst, olast);
    return {std::move(t.in).base(), t.out};

  [Note 2: If an exception is thrown, some objects in the range first + [0, n) are left in a valid but un
```

4.7 Modify 25.11.7 [uninitialized.fill] of [N4762] as follows:

```
  template<class NoThrowForwardIterator, class T>
-   void uninitialized_fill(NoThrowForwardIterator first, NoThrowForwardIterator last, const T& x);
+   constexpr void uninitialized_fill(NoThrowForwardIterator first,
+                                     NoThrowForwardIterator last, const T& x);
  Effects: Equivalent to:
    for (; first != last; ++first)
-     ::new (voidify(*first))
-       typename iterator_traits<NoThrowForwardIterator>::value_type(x);
+     construct_at(to_address(first), x);

  namespace ranges {
    template<no-throw-forward-iterator I, no-throw-sentinel-for<I> S, class T>
      requires constructible_from<iter_value_t<I>, const T&>
-     I uninitialized_fill(I first, S last, const T& x);
+     constexpr I uninitialized_fill(I first, S last, const T& x);
    template<no-throw-forward-range R, class T>
      requires constructible_from<range_value_t<R>, const T&>
-     borrowed_iterator_t<R> uninitialized_fill(R&& r, const T& x);
+     constexpr borrowed_iterator_t<R> uninitialized_fill(R&& r, const T& x);
  }

  Effects: Equivalent to:
    for (; first != last; ++first)
-     ::new (voidify(*first)) remove_reference_t<iter_reference_t<I>>(x);
+     construct_at(to_address(first), x);
    return first;

  template<class NoThrowForwardIterator, class Size, class T>
-   NoThrowForwardIterator uninitialized_fill_n(NoThrowForwardIterator first, Size n, const T& x);
+   constexpr NoThrowForwardIterator uninitialized_fill_n(NoThrowForwardIterator first,
+                                                         Size n, const T& x);

  Effects: Equivalent to:
    for (; n--; ++first)
-     ::new (voidify(*first))
-       typename iterator_traits<NoThrowForwardIterator>::value_type(x);
+     construct_at(to_address(first), x);
    return first;

  namespace ranges {
    template<no-throw-forward-iterator I, class T>
      requires constructible_from<iter_value_t<I>, const T&>
```

```
-     I uninitialized_fill_n(I first, iter_difference_t<I> n, const T& x);
+     constexpr I uninitialized_fill_n(I first, iter_difference_t<I> n, const T& x);
  }

  Effects: Equivalent to:
    return uninitialized_fill(counted_iterator(first, n), default_sentinel, x).base();
```

4.8 Add 25.11.8 [special.default_construct] to [N4762]:

```
  template<class T>
    constexpr T* default_construct_at(T* location);

  namespace ranges {
    template<class T>
      constexpr T* default_construct_at(T* location);
  }

  Constraints:
    The expression ::new (declval<void*>()) T is well-formed when treated as an unevaluated operand.

  Effects: Equivalent to:
    return ::new (voidify(*location)) T;
```

5 Implementation Experience

— Microsoft STL This has been partially implemented for support of constexpr vector in MSVC STL.
